SUMMARY

Backend and full stack developer with experience at McKesson, CAE, and Presagis building data pipelines, internal tools, and simulation systems. Concordia Computer Science, graduating December 2026. Fluent in English and French.

EXPERIENCE

McKesson | *Software Developer, contract extension* **Aug 2026 to Present**

Contract scheduled through December 2026.

- Building a Python and .NET agent that converts recorded meetings into structured transcripts, keyframes, and summaries.
- Developing retrieval over the meeting corpus to answer questions using context from past calls.

McKesson | *Software Developer Intern* **May 2026 to Aug 2026**

- Automated routine approval steps in production decision workflows with Python and .NET AI modules.
- Built internal iOS applications in Swift that enforced data privacy rules for sensitive business information.

CAE | *Cloud Engineer Intern* **May 2025 to Aug 2025**

- Built PowerShell automation to compare Git versioned virtual assets across environments, increasing data governance coverage by 35%.
- Generated an interactive HTML report that traces asset relationships and highlights configuration differences for reviewers.
- Developed C++ simulation algorithms that removed manual recalculation steps for operators.

CAE | *Software Developer Intern* **Sep 2024 to May 2025**

- Built an XML based productivity extension with reusable utilities, reducing one recurring test developer task from 4 hours to 30 minutes.

CAE | *Software Engineer Intern, with extension* **Aug 2023 to Sep 2024**

- Developed and refactored C++ and Python components for LiDAR and infrared simulation using profiling and the Strategy pattern.
- Built C++ sensor stream pipelines with validation and automated tests, reducing data inconsistencies by 20%.

Presagis | *Simulation Developer Intern, with extension* **May 2022 to Jun 2023**

- Prototyped an NVIDIA Omniverse pipeline that automated asset preparation and reduced manual modeling time by 25%.
- Produced three internal reports on ML workflows for robotics point clouds and demonstrated prototypes to stakeholders.
- Automated Blender and Unreal Engine asset import and mapping in Python to reduce per asset preparation work.

EDUCATION

Concordia University | *Bachelor's, Computer Science* **Expected Dec 2026**

Marianopolis College | *Business* **Sep 2020 to Jun 2022**

SKILLS

Languages: Python, C++, TypeScript, JavaScript, SQL, PowerShell, Swift
Frameworks and runtimes: .NET, Node.js, Express, Next.js
Databases: SQLite, MongoDB
Tools and platforms: Git, Jira, Unreal Engine, Blender, NVIDIA Omniverse
Web: HTML, CSS

PROJECTS

Neural Narratives | *Unreal Engine, C++, Blender* **Sep 2024 to May 2025**

- Built a pipeline that transforms neuroimaging datasets into scene graphs for VR exploration, with C++ components for streaming updates.

Roger | *Python, asyncio, SQLite* **Jan 2026 to Present**

- Built an asynchronous pipeline that scans more than 100 prediction markets every 30 seconds and persists market data in SQLite.
- Implemented five strategies with paper execution, configurable live order support, risk checks, and Bayesian scoring updated from trade outcomes.

PROFESSIONAL DEVELOPMENT

- Introduction to DevOps and Microsoft Development Platforms, LinkedIn Learning course completion, May 2025.
- Pratt & Whitney Micro WIL, Certificate of Completion, December 2025.
