SUMMARY

Software developer with experience at McKesson, CAE and Presagis across AI-assisted workflows, cloud automation and simulation. Builds Python, .NET and C++ tools that reduce repetitive work, validate data and improve reliability.

EXPERIENCE

McKesson | Software Developer Intern - GenAI team Aug 2026 - Present
- Developing Power Automate workflows for a generative AI assistant to retrieve context and answer questions across previous discussions.
- Contributing to 4+ projects across the internship and extension, integrating Python, .NET and LLM APIs into business workflows.
- Supporting the GenAI team's AI development in collaboration with the lead data scientist for the Canada region.

Software Developer Intern May 2026 - Aug 2026
- Integrated Python and .NET AI modules into production decision workflows, automating routine approvals for operational teams.
- Built internal Swift iOS applications enforcing data-privacy rules; prototyped mobile, backend and cloud-storage features to unblock cross-functional work.

CAE | Cloud Engineer Intern May 2025 - Aug 2025
- Built PowerShell automation comparing Git-versioned virtual assets across environments, exposing configuration drift and increasing data-governance coverage by 35%.
- Generated interactive HTML reports tracing asset relationships and configuration differences for simulation stakeholders.

Software Developer Intern Sep 2024 - May 2025
- Engineered an XML-based productivity extension with reusable utilities, reducing a recurring four-hour task to 30 minutes.
- Implemented Python algorithms through Git-based workflows to improve runtime stability and reduce simulation-test defects.

Software Engineer Intern, with extension Aug 2023 - Sep 2024
- Added and optimized C++ algorithms for LiDAR and infrared simulation, increasing test coverage by 20%.
- Built C++ sensor-data pipelines with validation and automated tests, reducing data inconsistencies by 20%.

Presagis | Simulation Developer Intern, with extension May 2022 - Jun 2023
- Prototyped an NVIDIA Omniverse pipeline for digital-twin asset preparation, reducing manual modeling time by 25%.
- Produced three internal reports on ML point-cloud workflows; automated Blender and Unreal Engine import and mapping in Python.

Student Projects | 3D Digital Twin Developer 2021 - 2022
- Produced NVIDIA Omniverse visuals across 5+ student projects to communicate design concepts to instructors and peers.

EDUCATION

Concordia University | Bachelor's program, Joint Major in Computer Science and Computational Arts
Sep 2022 - Sep 2026 | Requirements completed Sep 2026; formal conferral pending
Marianopolis College | Business studies
Sep 2020 - Jun 2022

TECHNICAL SKILLS

Core languages: Python, Java, C++
Web and applications: JavaScript, TypeScript, React, .NET, Swift, HTML/CSS, API integration
Data, cloud and tools: SQL / SQLite, AWS, GCP, Azure, Terraform, PowerShell, Git, CI/CD, LLM APIs
Communication: English and French (fluent)

PROJECTS

SceneBreaker | Browser-based robot-route testing
- Built an editable route-testing workbench with local 2D/3D scene imports, configurable motion and deterministic stress tests; exports scenarios and replay evidence.

Neural Narratives - McGill Neuroscience collaboration | Unreal Engine, Blender, C++
- Converted neuroimaging datasets into scene graphs for interactive VR exploration, with C++ streaming components supporting multiuser sessions.

Roger - Paper-Trading Research System | Python, asyncio, SQLite
- Built five asynchronous strategy workers with data validation, Bayesian scoring and risk checks; stored research results in SQLite for strategy analysis.

PROFESSIONAL DEVELOPMENT

AZ-400 Azure DevOps Engineer Expert Cert Prep - LinkedIn Learning, May 2025 (training, not certification).
