Montreal, QC, Canada | +1 (514) 679-5568 | diego.crisafu@gmail.com | [LinkedIn](#) | [GitHub](#) | [portfolio](#)

SUMMARY

Aspiring Software Engineer with hands-on experience designing and automating data workflows and pipelines using Python, PowerShell, and SQL. Proven ability to optimize processes and reduce manual effort across cloud and simulation environments.

EXPERIENCE

McKesson | *Software Developer Intern*

May 2026 - Aug 2026

- Developed internal .NET applications that enforced data-privacy policies and securely handled sensitive information, reducing the risk of data breaches
- Worked with engineers on cross-functional projects covering native mobile apps, backend services, and cloud storage, delivering functional prototypes that met project milestones
- Integrated AI modules built with Python and .NET into production systems, enabling automated decision-making across the organization
- Operating within enterprise-grade cybersecurity standards for protected data

CAE | *Cloud Engineer internship*

May 2025 - Aug 2025

- Built a PowerShell automation to detect and summarize configuration drift by diffing Git-versioned virtual assets across multiple environments and releases, enhancing data governance and increasing coverage by 35%.
- Optimized simulation processes by developing and implementing advanced algorithms, leveraging analytical thinking to enhance efficiency and accuracy.
- Generated an interactive HTML report that traverses asset relationships and highlights differences, accelerating review and approvals.

Software Developer Internship

Sep 2024 - May 2025

- Engineered a test developer productivity extension (XML) with reusable utilities and tooling, accelerating delivery by reducing a four hour task to thirty minutes and increasing consistency across releases.
- Collaborated with development teams using Git to develop and implement advanced algorithms, improving simulation processes and increasing efficiency and accuracy.

Software Engineer Internship + Extension

Aug 2023 - Sep 2024

- Grew test coverage for LiDAR and infrared simulation by 20% in C++ by adding and optimizing algorithms
- Enhanced simulation platform performance by up to 15% and improved code maintainability by refactoring sensor-processing modules in C++ and Python, using profiling tools and applying design patterns such as Strategy
- Reduced data inconsistency by 20% by building C++ pipelines for sensor streams with robust validation and tests.

Presagis | *Simulation Developer Internship + Extension*

May 2022 - Jun 2023

- Prototyped Omniverse digital-twin pipeline, reducing manual modeling hours by 25% by automating processes and enhancing efficiency.
- Partnered with NVIDIA research, delivering 3 internal reports on ML point-cloud workflows for robotics, and conducted demos to stakeholders, showcasing advanced AI capabilities.
- Automated Blender/UE asset import and mapping with Python, reducing per-asset preparation time.

3D Digital Twin Developer Student

2021 - 2022

- Automated asset import and mapping for Blender and Unreal Engine using Python, reducing export defects by 35% per asset
- Produced high-quality visual effects for 5+ projects by utilizing NVIDIA Omniverse, elevating project presentations and stakeholder engagement.

EDUCATION

Concordia University | *Bachelor's, Computer Science (GPA: 3.0)*

Sep 2022 - Sep 2026

Marianopolis College | *Associate's, Business (GPA: 3.5)*

Sep 2020 - Jun 2022

LICENSES & CERTIFICATIONS

- Azure DevOps Engineer Expert (AZ 400) Cert Prep: Introduction to DevOps and Microsoft Development Platforms: LinkedIn Learning • Issued May 2025
- Micro WIL Certificate of Completion: Pratt & Whitney • Issued Dec 2025

SKILLS

- Programming Languages:** Python, JavaScript, Java, C/C++, Scala, Swift
- Engineering & Management:** SQL, Data Structures, Artificial Intelligence (AI), Data Governance, Data Quality, Cyber Threat Intelligence, Security, Web Stacks, Web Development, .NET, iOS
- Tools & Automation:** PowerShell, Bash, HTML/CSS, MS Office, Git, Version Control, Jira
- Soft Skills:** Interpersonal Relationships, Analytical Thinking, Presentation Skills

PROJECTS

Neural Narratives | *VR Collaboration McGill Neuroscience*

Sep 2024 - May 2025

- VR and AI Developer, goal was to translated neuroimaging data into an immersive VR application
- Unreal engine, Blender, Digital twin Creation with C++

Roger the trading bot (Python, asyncio, SQLite) | <https://github.com/diegocrisafu/expense>

Jan 2026 - Present

- Designed a high-frequency data ingestion pipeline in Python using asyncio to scan 100+ prediction markets every 30 seconds, automating ETL workflows
- Executed five concurrent trading strategies on the Polygon mainnet, ensuring data consistency and low-latency order placement
- Implemented a Bayesian scoring engine in Python that learns from trade outcomes and stores results in a SQLite relational database, optimizing SQL queries for rapid data retrieval
