Montreal, QC, Canada | +1 5146795568 | diego.crisafu@gmail.com | LinkedIn | GitHub | portfolio

SUMMARY

Backend and full-stack developer experienced at McKesson, CAE, and Presagis, building Python and C++ data pipelines, internal tools, and cloud systems. Skilled in SQL, AWS, GCP, .NET, Git, and AI/LLM API integration, with experience automating workflows, validating data, and improving software and simulation reliability.

EXPERIENCE

Mckesson | ***AI Engineer*** **Aug 2026 - Present**

- Built a Power Automate system that enabled a generative AI agent to retrieve relevant context and answer questions across past discussions.
- Integrates LLM APIs into production business workflows using Python and .NET, enabling practical AI capabilities for operational teams.
- Works with cross-functional teams as part of McKesson's GenAI team, leading AI innovation initiatives.

McKesson | ***Software Developer Intern*** **May 2026 - Aug 2026**

- Business teams needed faster, more consistent approvals, so integrated Python and .NET AI modules into production decision workflows, reducing manual decision effort.
- Internal stakeholders needed stronger data-privacy controls, so built Swift iOS applications with Git-based version control that enforced policy compliance and reduced exposure to sensitive-information leaks.
- Cross-functional engineering teams needed to maintain delivery timelines, so independently prototyped mobile, backend, and cloud-storage features using .NET and Python, unblocking project work and keeping initiatives on schedule.

CAE.inc | ***Cloud Engineer internship*** **May 2025 - Aug 2025**

- Simulation stakeholders needed visibility into environment inconsistencies, so built PowerShell automation that compared Git-versioned virtual assets, summarized configuration drift, and increased data-governance coverage by 35%.
- Simulation stakeholders needed actionable review materials, so generated an interactive HTML report tracing asset relationships and configuration differences, shortening asset review cycles.

Software Developer Internship **Sep 2024 - May 2025**

- Development teams needed to reduce repetitive release work, so engineered an XML-based productivity extension with reusable utilities and tooling, cutting a four-hour task to 30 minutes and standardizing release workflows.
- Simulation teams needed more reliable test outcomes, so implemented Python algorithms through Git-based workflows, improving runtime stability and reducing defects identified during test runs.

Software Engineer Internship + Extension **Aug 2023 - Sep 2024**

- Simulation teams needed broader validation of LiDAR and infrared capabilities, so added and optimized C++ algorithms, increasing test coverage by 20%.
- Engineering teams needed more dependable sensor data, so built C++ pipelines with validation and automated tests, reducing data inconsistency by 20%.

Presagis | ***Simulation Developer Internship + Extension*** **May 2022 - Jun 2023**

- Prototyped an Omniverse pipeline that automated digital-twin asset preparation, reducing modeling hours by 25%.
- Partnered with NVIDIA Research to produce three reports and prototypes on ML point-cloud workflows, informing the platform roadmap.
- Automated Blender and Unreal Engine asset import and mapping in Python, reducing per-asset preparation time.

3D Digital Twin Developer Student **2021 - 2022**

- Instructors and peers needed clearer design-review materials across five or more projects, so produced visual effects in NVIDIA Omniverse that improved communication of design concepts.

EDUCATION

Concordia University | ***Bachelor's, Computer Science*** **(GPA: 3.0)** **Sep 2022 - Sep 2026**

Marianopolis College | ***Associate's, Business*** **(GPA: 3.5)** **Sep 2020 - Jun 2022**

SKILLS

- **Languages**: Python, Java, C/C++, JavaScript, AI/ML, TypeScript, NoSQL, PowerShell, Power BI, Swift
- **Frameworks & Cloud**: .NET, SQL, MongoDB, Amazon Web Services, Google Cloud Platform, Data Structures, Artificial Intelligence (AI), Relational Database Concepts, Cloud Platforms Azure, Distributed Systems, Microservices, Generative AI
- **Tools**: Git, Docker, CI/CD Pipelines, PowerShell, Bash, Jira, HTML/CSS, API Integration
- **Soft Skills**: Team leadership, Mentoring and coaching, Stakeholder communication, Cross-functional collaboration, Technical presentations, PowerPoint, Excel, Rational Decision Making

PROJECTS

Neural Narratives | ***Mcgill Neuroscience*** **Sep 2024 - May 2025**

- Built a VR collaboration application for McGill Neuroscience.
- Built a data pipeline that converted neuroimaging datasets into structured scene graphs for an Unreal Engine VR application, enabling neuroscientists to explore patient data interactively in 3D.
- Implemented a digital twin in Unreal Engine and Blender with C++ components for streaming updates, supporting multiuser sessions and maintaining stable frame rates for VR headsets.

Roger the trading bot | Roger the trading bot (Python, asyncio, SQLite) **Jan 2026 - Present**

- Executed five concurrent trading strategies on the Polygon mainnet using asynchronous workers, maintaining data consistency and reliable order placement under network load.
- Implemented a Bayesian scoring engine in Python that learned from trade outcomes, stored results in a SQLite relational database, and optimized SQL queries for rapid strategy analysis and decision-making.

LICENSES & CERTIFICATIONS

- Azure DevOps Engineer Expert (AZ 400) Cert Prep: LinkedIn Learning: Issued May 2025 **May 2025**
- Micro WIL Certificate of Completion: Pratt & Whitney: Issued Dec 2025 **Dec 2025**
